

RESIN COMPOSITION

ABSTRACT

~~As a~~ resin composition that solves the problems ~~such as of an~~ unpleasant odor encountered when a tertiary amine compound is used as a catalyst in a reaction of a polyol and a polyisocyanate, ~~and that~~ promotes the curing of these resins and improves the adhesion to metals, inorganic materials, and organic materials, ~~the present invention provides a resin composition containing~~ contains the following components as essential components,

- (A) a polyol
- (B) a polyisocyanate
- (C) a silane coupling agent containing an imidazole

group.

~~—(here, the~~ The ratio NCO/OH of the number of isocyanate groups in the polyisocyanate (B) to the number of hydroxyl groups in the polyol (A) in the above composition is from 0.6 to 4.0, and the weight ratio of {(A) + (B)}:(C) is from 100:0.01 to 100:10+.
